

# Software Updates - P2P - Version 3.2.3

Software Updates – September 21, 2018

This document summarizes the software changes deployed on September 21st, 2018 for the Peer-to-Peer fundraising module.

## Notable Additions

**Ask your donors to cover the fee:** [Learn More Here](#)

<https://youtu.be/Q5OJTcDLMxs>

New functionality in the Peer-to-Peer Donation forms provides your donors with an opportunity to give a little more to help you cover your donation fees. If enabled, a check box will appear on your campaign donation forms asking your supporters to make an additional amount on each donation to help you defray the cost of the transaction. If a donor opts in, a new donation amount is quickly calculated and displayed.

In addition to enabling this functionality, you can also edit the feature message and donation percent in your Peer-to-Peer administration system.

**Share your donation Add-On:** [Learn More Here](#)

<https://youtu.be/PLIO3DkpFpU>

Leverage the power of social by allowing your donors to share their commitment to your cause with their friends and family on Facebook. After enabling this feature in your site administrative tool, users will receive a pop-up message after their donation is complete inviting them to spread the word.

**Security Features:** [Learn More Here](#)

<https://youtu.be/VUuQrMr7gZk>

The threat of online bots or malintended trollers to abuse your site tools is real. That is why we have released new site tools to help you combat abuse.

- **Contact Upload Limits:** Administrators can now set a limit on the number of contacts a fundraiser can upload or add to their online dashboard.
- **Contact Lists & Email Limits:** The system now limits the number of emails a fundraiser can send in a 24 hour period to 100.
- **Disable All Fundraiser Email Tools:** Administrators can now disable the Engaging Networks powered email tools available to site fundraisers. This feature will disable the Email and Contacts sections of the dashboard and send users to their email clients to send emails.

## New Feature

### Reports

- **Discount Report:** Summarizes discount code details, limits and usage.
- **Registration Type Summary Report:** Summarizes event registrations by participant type.
- **Group Roster:** Displays site fundraisers by group affiliation, and group hierarchy.

## Functional Improvement

- **Re-send Registration Confirmation Email:** Administrators can now resend the registration confirmation email to registered fundraisers from the Manage Fundraiser area of the administration system.
- **Enhancements to discount code display:** Administrators can now sort the display by code usage and code limit.
- **Offline Gift Form – Payment Types:** Administrators can now translate the gift type items for offline entry.
- **Fundraiser Search:** Site display now allows donors and site visitors the option on the results display.

**P2P API:** <http://support.engagingnetworks.net/amplifyAPIDocs/>

The API provides secure connections to the database, allowing read access in real time. Common uses of the APIs allow developers to create content rich applications for web sites to display donor and gift information.

The API is a set of RESTful method calls and parameters. Data is returned back in JSON format. JSON data 'streams' can be easily parsed using many popular tools. The parameters allow client programmers to easily filter, sort, and truncate the data from their site.

New methods have been added to the API to provide tools for the consolidation of fundraiser and site fundraising data.

- **Get registered sites for given fundraiser**
- **Get fundraiser groups**
- **Top Groups in given sites**
- **Top individuals in given sites**

## Bug

The following issues have been resolved:

- **Administration | Blocking Fundraisers:** Blocking fundraiser tools are now automatically closing all fundraiser pages.
- **Administration | Task Widget:** Unchecking a task now removes it from the fundraiser dashboard.
- **Administration | Participant Types:** The administrative interface now does not allow you to delete participant types that have active registrations.
- **Group Summary Report:** The number of groups column is now reporting accurate numbers.
- **Password Reset Process:** On sites with custom domains, the password reset process would send users back to the login. This is resolved.
- **Public Fundraiser Search:** Data displayed under team and individuals on teams is now accurate.
- **Public Personal Pages:** Video and organization information now displays on personal fundraising pages on mobile devices.
- **Registration Process | Creating a page URL:** Validation code has been added to prevent the inclusion of special characters in the URL that cause errors.
