

Software Updates - P2P - Version 3.3

Software Updates – November 19, 2018

This document summarizes the software changes deployed on November 19th, 2018 for the Peer-to-Peer fundraising module.

New Feature

Fundraiser Detail with Registration

This new report is a combination of the Fundrasier detail report and the Registration detail report. It displays the fundraising performance of each registrant of the site and includes the information collected during registration. This includes questions, opt-ins and untagged fields.

Functional Improvement

Change in logic for suggested page url: During registration, the system prefills the page url for fundraisers. This suggestion was using the fundraisers first name. This has been changed to use the fundraisers first and last names. This will reduce the frequency of duplication warnings being presented to fundraisers.

Box size for Send Email: The email box presented for editing when creating and email in the fundraiser dashboard, has been increased to make entering email text easier for fundraisers.

Bug

The following issues have been resolved:

- **Site Copy with Discounts causes error:** Making a duplication of an event site that had discounts configured caused an error in the new site.
- **First Folder creation causes error:** In an account where no sites or folders have been created; creating a folder reported and error.
- **Turning off site Therometers not removing it from the Search display:** Turning off the site therometers left the search display looking unbalanced.

- **Translation of label on search buttons was not working:** Changing the button term from Lables and Text manager was not changing the button on the search page.
- **Task List Actions for Facebook and Twitter:** Choosing the options for Facebook and Twitter from the task list inside of the fundraiser dashboard now pop-up these sharing tools.
- **Task List labels misaligned:** Task list labels where misaligned with the functions.
